This Data Handbook has been produced by the Economic Advisory and Research Unit with reference to the Kenya Socio-Economic Atlas of 2014; which depicts the National Population Census. It complements the County Statistical Abstract which is an annual publication by the Kenya National Bureau of Statistics and is intended to be a principal source of Baseline data on the County for both internal and external County stakeholders. The tables contained in the Handbook provides a summary of statistics relating to the County's Socio-Economic indicators and characteristics.

This handbook represents an invaluable resource for those in charge of devising development initiatives at both the county level and the departmental level. The handbook illuminates a broad range of indicators that will inform targeting, monitoring and evaluation as well as planning and policy tool as we strive to fulfill the critical devolved functions and steer development processes at all levels. The handbook is suitable for all levels of management.

It's also a good source of general information for the representatives of the commercial and non-commercial private sector, as well as for the broader public, who can utilize it as a valuable source of evidence to support specific development debates and decisions.

Thus, the handbook is important as the county government's political, social, and economic development focuses on the transformation of the county; since it equips and informs planning, decision-making, policy formulation, and subsequent implementation of the county policies and strategies.
